

IDEATION PHASE

Brainstorming – Idea Generation – Prioritization

Date	03 NOV 2025
Team ID	NM2025TMID05906
Project Name	Garage Management System
Maximum Marks	4

Brainstorming & Idea Generation:

During our brainstorming session, our team discussed several real-world problems faced by automobile repair shops and service centers. We aimed to develop a technology-based solution that improves garage operations, enhances customer satisfaction, and can be implemented efficiently using Salesforce's CRM and automation capabilities.

We listed multiple potential ideas such as:

- Vehicle Service Appointment and Tracking System
- Spare Parts Inventory Management System
- Garage Billing and Customer Relationship System
- Full Garage Management System (GMS) After evaluating each idea for feasibility, impact, and

implementation potential, we finalized "Garage Management System (GMS)" as our project.

Why We Prioritized This Idea:

- Many garages still depend on manual systems, which lead to inefficiency and poor customer management.
- The idea supports Salesforce's strength in CRM, automation, and workflow management.
- It helps garages organize service records, track spare parts, manage employees, and communicate effectively with customers.
- It creates a scalable and digital solution that can be adopted by small and large garages alike.

Final Idea:

Garage Management System (GMS) – A Salesforce-based system that helps automotive service centers manage daily operations such as vehicle servicing, customer communication, billing, and inventory control. The system leverages Salesforce's cloud features like workflows, triggers, reports, dashboards, and automation tools to ensure smooth and efficient garage operations.
